### Faculty Presenter

**Mark Lebwohl, MD**

Dean for Clinical Therapeutics  
Icahn School of Medicine at Mount Sinai  
Professor and Chairman Emeritus  
Kimberly and Eric J. Waldman Department of Dermatology  
New York, New York

### Program Overview

Characterized by severe flares of painful, pruritic, pus-filled blisters, generalized pustular psoriasis (GPP) is a rare dermatologic disorder that many dermatologists have never seen...at least not that they realized. Join GPP expert Dr. Mark Lebwohl to find out what dermatologists and other healthcare professionals need to know about the pathogenesis of GPP, the mechanism of action of IL-36 receptor antagonists, and how to recognize, diagnose, and manage patients with this inflammatory cutaneous disease.

### Target Audience

This educational activity is designed for dermatologists and other healthcare professionals involved in the management of rare dermatologic conditions such as GPP, including primary care physicians, nurse practitioners, and physician assistants.
